Explanation:

Documents 1-4 cited in the ISR describe a patch for external use which has a hormone such as estradiol as the active ingredient, comprises an acrylic adhesive containing isocyanate crosslinking agent, and has a polyester film and other films, etc. Also, the blending quantity for each ingredient and the film thickness can be appropriately decided by a party skilled in the art based on the use and medicinal benefits. Therefore, the inventions described in claims 1, 2 and 5 do not appear to be novel or to be novel.

Because documents 1-13 do not describe the inventions described in claims 3 and 4, these inventions appear to be novel.

Because documents 5-13 describe a noretisteron as an active ingredient, crotamiton, oleic acid, and myristic acid isopropyl as absorption promoting agent and solvent, using these does not require any particular creativity.

Therefore, the inventions described in claims 3 and 4 do not appear to involve an inventive step.
